Patient information extraction

Given the provided clinical note, extract the corresponding patient summary following the template provided.

Make sure to extract all the information from the clinical note into the template, but do not add any new information.

If a field is not mentioned, simply write "feature": None.

Generator (dialogue → note)

Given the provided patient-doctor conversation, generate the corresponding clinical note as written by the physician.

Make sure to use all the information from the dialogue into the note, but do not add any new information.

Extractor (dialogue → summary)

Given the provided patient-doctor dialogue, write the corresponding patient information summary in JSON format.

Make sure to extract all the information from the dialog into the template, but do not add any new information.

If a field is not mentioned, simply write "feature": "None".

Summarizer (summary → note)

Given the provided JSON patient information summary, generate the corresponding clinical note as written by a physician.

Make sure to use all the information from the summary into the note, but do not add any new information.
